Iowa Highway Patrol Road Report:

Weather Issues in Transportation, 2004 Weather can have a profound negative impact on mobility and traveler safety. Nationally, adverse weather is a factor in 15 million car and truck crashes and costs society nearly 42 billion annually. Through intelligent transportation systems (ITS) and better road weather information, winter maintenance managers, traffic managers, and travelers now have the opportunity to manage traffic and travel to more effectively ameliorate weather's safety and productivity challenges. In the past few years, weather-related transportation issues have become a priority for the national research agenda. On June 14, 2004, the Iowa Department of Transportation hosted a regional multi-disciplined forum. The purpose of the forum was to identify Midwest regional research and technology transfer priorities in weather-related transportation research and to discuss the possibility of establishing a regional research program to support the national road weather research agenda. The June 14 Weather Issues in Transportation focus group forum provided an opportunity for transportation agency professionals, professionals representing transportation users, commercial weather data and forecast providers, and members of the meteorology community to express their priorities for weather-related transportation research and technology transfer. Focus groups were organized into the following eight initiatives: 1. Weather Providers, 2. Weather Users, 3. Maintenance Equipment Technologies, 4. Maintenance Management, 5. Maintenance Operations, 6. Traffic Operations Safety, 7. Intermodal Traffic, and 8. Design Construction. The focus groups identified and ranked 25 research problem statements that would require over 20 million for first-year funding if all projects were started in the same year.

Traffic Safety, 1965

Gravel Roads Ken Skorseth, 2000 The purpose of this manual is to provide clear and helpful information for maintaining gravel roads. Very little technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been more of an art than a science, and very few formal standards exist. This manual contains guidelines to help answer the questions that arise concerning gravel road maintenance, such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right.

Where the Weather Meets the Road National Research Council, Transportation Research Board, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Weather Research for Surface Transportation: The Roadway Environment, 2004-05-01 Weather has broad and significant effects on the roadway environment. Snow, rain, fog, ice, freezing rain, and other weather conditions can impair the ability of drivers to operate their vehicles safely, significantly reduce roadway capacity, and dramatically increase travel times. Multiple roadway activities, from roadway maintenance and construction to shipping, transit, and police operations, are directly affected by inclement weather. Some road weather information is available to users currently; however, a disconnect remains between current research and operations, and additional research could yield important safety and economic improvements for roadway users. Meteorology, roadway technology, and vehicle systems have evolved to the point

where users could be provided with better road weather information through modern information technologies The combination of these technologies has the potential to significantly increase the efficiency of roadway operations road capacity and road safety Where the Weather Meets the Road provides a roadmap for moving these concepts to reality
